RE-NU Spray Gun System

Complete Advanced Gun Polishing System

 Waterborne and  Solvent!

RE-NU™ is a process designed to restore the performance of an spray gun. **RE-NU** Performance removes/reduces micro inclusions from the surface of the spray gun. As a result there is less friction and turbulence in the flow of fluid and air that maximize performance. This system works with any material however, on metal surfaces **RE-NU** produces exceptional results. **RE-NU** polishing system has a Four Step process. We will review each step to assure success.

No Fish Eye - Simple 4 Step Process - Use Recommended Every 3 - 6 Months

SIMPLE 4 STEP PROCESS:

Step One: Tear Down

Step Two: Detail Cleaning of the Spray Gun

Step Three: RE-NU Polish

Step Four: EZ Release Spray (for Waterborne & Solvent)

RE-NU Is Just One Step In The BECCA 3P System!

[The Importance Of A Properly Cleaned Spray Gun](#)

Effects Of Improperly Cleaned Spray Gun A painter can expect to spend somewhere between \$650-950 on a spray gun so why would you not take the time to properly clean your spray gun? The most important painting tool, "the spray gun" when not cleaned and functioning properly, results in potential problems. Faulty guns produce poor finishes,...
